Introduction

FabIO is a C++ Discord bot using Sleepy Discord (docs at: https://yourwaifu.dev/sleepy-discord/documentation.html). Internally it hosts a LUA state for game programming, and renders flat html files to visuals. It is meant as a step towards the Zero Project, and allows a wide variety of rpg and board-like games to be played via Discord chat.

Given you have access to this forum, you can program the bot using the guide below. Essentially it is as simple as making a wiki page for your game, and then telling the bot to load the code from that wiki page.

Programming Details

Game Code Pages

- std-lite - A generic all purpose game with support for a lot of very basic stuff. Counters, Dice, Sheets, etc. Maintained by JasonP.
